### **AREA CONVERSION**

1 Hectare	=	19.657178 ropanis
	=	1.476569 bighas
	=	2.471065 acres

Area less than 0.1 ha is not shown in tables

### **ROUNDING OF FIGURES**

Some figures have been rounded off to the nearest final digit. This may result in a slight discrepancy between the sum of the individual item and the total as shown in the table.

Sufficiently precise estimates have been obtained for major characteristics covered in the census. However, due to the inherent properties of the sampling, the same cannot be said for those items that are either minor or location-specific in the municipality or district.

### **Message**

Agriculture is the mainstay of the Nepalese economy. The agriculture sector, consisting of crop production and livestock raising, supports the livelihood of a large number of population of Nepal and contributes significantly to its Gross Domestic Product (GDP). Food security and reducing rural poverty depend mostly on the development of the agriculture sector of the country. Therefore, the development of the agriculture sector is crucial to the development of Nepal.

Timely and reliable data on agriculture is a prerequisite for evidence-based policy-making and planning of the agriculture sector. I am happy to note that the 7th National Sample Census of Agriculture 2022 (NSCA 2022) recently conducted by the National Statistics Office (NSO), provides detailed information on the agricultural structure of the country down to the local levels. I believe that the results of this census will be of immense important in planning and policy-making for agricultural development across the three tiers of government and monitoring the impact of the policies on the development of the agriculture sector and the livelihood of the rural people.

I advise for the proper use of the census results in research and policy-making that are effective to addressing emerging economic, social, and environmental issues in agriculture. I am confident that this publication will serve the expectations of data needs of wider users. At this stage, I would like to thank NSO for its successful conduction of the census and timely release of the census reports. I extend my sincere appreciation to the NSO staffs, the agencies at the three tiers of government, the development partners, the media, and the respondents for their support and cooperation to make this census successful.

## FOREWORD

It is my great pleasure to share the statistical report of the seventh National Sample Census of Agriculture 2021/22 (NSCA 2021/22) conducted by the National Statistics Office (NSO). The agriculture census is one of the largest statistical operations in Nepal that has been conducted once in every ten years since 1961/62. The census provides basic structural data on the agriculture sector such as the size of holdings, land tenure, land use, area harvested, irrigation, livestock, labour and other agricultural inputs. The information is vital in agricultural planning and policy-making, research and development, and monitoring the impact of agricultural activities on the environmental, social, and economic sustainability of farming. It also provides supportive data for monitoring the achievement of Sustainable Development Goals (SDGs) related to agriculture.

The NSCA 2021/22 is the first agriculture census of Nepal after the new administrative setup of the country that provides representative data for all 753 municipalities. The outcomes of this census would be of immense help for the newly formed local and provincial governments that lack quality data on agriculture with international standards of comparability. In addition, statistics from this census is timely and play a significant role in setting targets and framing policies for agriculture development in the forthcoming 16<sup>th</sup> plan of the nation.

I am sure that the census publications including this national statistical report serve as important resources for the policymakers of all three tiers of government, development partners, agribusiness community, researchers, and scholars involved in the agriculture sector.

I acknowledge the great efforts made by the National Statistics Office for the successful operation of the census and the timely release of the reports and extend my sincere thanks to the officials and staff of NSO at the center and, district offices, the supervisors and enumerators involved in data collection, and the respondents who have provided the valuable information to make this census a great success.

My sincere thanks are due to all government agencies, the members of Steering and Technical committees, the development partners, especially the Food and Agriculture Organization (FAO) of the United Nations for its generous technical support at different stages of census implementation, and all other stakeholders for their cooperation and support in the successful conduct of the census.

**PREFACE**

Nepal has a glorious history of taking the agriculture census once every ten years, with the first one taking place in 1961/62. The National Sample Census of Agriculture 2021/22 (NSCA 2021/22) is the seventh census in this cycle and the first one after the new federal setup of the country. Its primary purpose is to provide data on the structural aspects of agriculture that change slowly over time, such as the size of holdings, land tenure, land use, area harvested, irrigation, livestock, labour and other agricultural inputs up to the local level. The census follows standard international concepts, definitions and methodology as recommended by the FAO World Programme for the Census of Agriculture (WCA 2020). The census provides benchmark data on agriculture which is essential for monitoring and evaluating the impact of development policies and programs and addressing emerging social, economic, and environmental policy issues in agriculture.

The NSCA 2021/22 is a sample census that covers the whole country. It is designed to provide precise estimates of major variables at the municipality level. The census captures the agricultural activities operated by the households within the cut-off threshold. The main fieldwork for data collection took place from April 19 to June 2, 2022. After a rigorous process of data processing and analysis, the outputs of the census are presented in various reports for the national, province, district, and local levels. Among them, this report presents the major outputs of the census at the national level with an introduction of the census, its methodology, and a description of its major results. This is a matter of pride to express that the census was fully funded by the national budget and all the managerial and technical undertakings were successfully conducted by NSO staff.

The census reports serve as important resources for policymakers, planners, and researchers in the agriculture sector. However, the census report would not have come in this shape without the dedication of NSO staff and the support and collaboration of national and international stakeholders. In this regard, I am extremely grateful to the Deputy Chief Statisticians Mr. Nebin Lal Shrestha, Dr. Hem Raj Regmi, Mr. Dilli Raj Joshi and Ms. Munni Kumari Chaudhary for their overall guidance and management of the census. Dr. Mahesh Kumar Subedi and Mr. Badri Kumar Karki, Directors of the Agriculture and Livestock Census Section deserve special thanks for their prime role in the successful completion of the census. I would like to thank Directors Mr. Jay Kumar Sharma and Ms. Sahan Laxmi Tamrakara, Statistics Officers Mr. Ganesh Phuyal, Mr. Kapil Dev Joshi, Mr. Chet Bahadur Roka, and Mr. Kapil Dhital, Computer Officer Mr. Raju Pokhrel and Statistics Assistance Mr. Suroj Ghaju for their dedicated efforts to the census work. The Census Officers, Supervisors, and Enumerators deserve great appreciation for their contributions to the fieldwork of the census.

I acknowledge the generous technical support provided by FAO at different stages of census implementation including the sampling design, data analysis, and preparation of census reports.

Finally, I would like to express my sincere gratitude to the Hon'ble Vice-Chair of the National Planning Commission and the Chairman of the Steering Committee of the National Agriculture Census 2021/22, the other members of the Steering Committee, the Technical Committee, the Thematic Committees, and all others including the respondents, for their support and cooperation in the successful conduct of the census.

August, 2023

  
Tyam Raya  
Chief Statistician

# **PART I**

## **INTRODUCTION AND METHODOLOGY**

### **1.1 Background**

The National Statistics Office, previously known as the Central Bureau of Statistics, conducted the National Sample Census of Agriculture 2021/22 (NSCA 2021/22) covering all parts of the country. Nepal has a glorious history of taking the agriculture census once every ten years, with the first one taking place in 1961/62 and subsequent ones in 1971/72, 1981/82, 1991/92, 2001/02, 2011/12, and 2021/22. The NSCA 2021/22 is the seventh census in this cycle and the first one after the new federal setup of the country. Its primary purpose is to provide data on the structural aspects of agriculture that change slowly over time, such as farm size, land use, crop areas, and number of livestock, up to the local level (municipality). The census also includes the basic data on the organizational structure of agricultural holdings, including land tenure, irrigation, livestock numbers, labor, and use of machinery and other agricultural inputs. Furthermore, the census content has been broadened to encompass current areas of concern that vary annually, including the production of major crops. The census provides benchmark data on agriculture which is essential for monitoring and evaluating the impact of development policies and programs and addressing emerging social, economic, and environmental policy issues in agriculture.

### **1.2 Objectives**

The main objectives of the agriculture census 2021/22 are:

- i. To provide basic data on the structure of agriculture and characteristics of holdings for small geographical area (municipality),
- ii. To assist in planning and policy-making for agricultural development across the three tiers of government and monitoring the progress achieved,
- iii. To provide reliable data for benchmarking and reconciliation of current agriculture statistics,
- iv. To design frame for other agricultural surveys,
- v. To avail core data for compilation and monitoring of some agriculture-related SDG indicators.

### **1.3 Scope and coverage**

The purpose of the agriculture census is to collect information on the structure of the agricultural production industry, primarily at the household level. Regarding the content of the census, including statistical concepts, definitions, classifications, and output, the census has adhered to the guidelines set forth by the World Program for the Census of Agriculture 2020 (WCA 2020) developed by the FAO. The scope of the census mainly covers crop and livestock production activities. But it also includes holdings engaged in ancillary activities like forestry, fisheries, mushroom farming, beekeeping, floriculture, and nurseries provided that they have some crop or livestock production activities within the cut-off threshold.

As in the past censuses, the seventh census of agriculture also covers the whole country capturing the agricultural activities operated by the holdings within the cut-off threshold. Only agricultural holdings operated by households are included. The big-sized livestock activities above the predefined threshold operated by households and agricultural activities undertaken by government organizations, cooperatives, and business farms are excluded.

### **1.4 Statistical unit**

The statistical unit is the basic unit for which data are collected. The primary statistical unit for the seventh agricultural census is the agricultural holding.

### **1.5 Reference period**

The primary reference period for the data collected in the census was the calendar year 2021. Land area and livestock were collected in respect of the day of enumeration.

### **1.6 Sampling design**

#### **1.6.1 Domain of estimation**

Nepal is divided into seven provinces, 77 districts, and 753 municipalities for administrative purposes. The NSCA 2021/22 provides accurate estimates at the municipality level, making the 753 municipalities as domains of estimation for the sampling design.

#### **1.6.2 Sampling method**

The sampling method for estimation of various parameters of interest at municipality level is one of stratified two-stage sampling. Within a municipality the enumeration areas (EAs) are the primary stage units (PSUs) of sampling and within the selected enumeration area the agricultural households are the second stage units (SSUs) of

sampling. The enumeration areas are selected by probability proportional to size (PPS) systematic sampling (the number of holdings in the enumeration area is the size variable). The SSUs are selected by equal probability systematic sampling with implicit stratification.

### 1.6.3 Sampling frame

In line with the proposed sampling design, there are two types of sampling frame used for the agriculture census 2021/22: the frame for selecting the PSUs and the frame for the selection of agricultural holdings.

The sampling frame for PSUs was prepared from the list of enumeration areas (EAs) from the National Population and Housing Census 2021 (NPHC 2021). Following FAO recommendations an agricultural module was incorporated in the NPHC collecting basic agriculture related information from all households in the country including total area of operational holding, number of livestock, and number of poultry birds. The frame of PSUs consisted of the list of enumeration areas along with the number of households and agricultural households.

The frame for SSUs was developed through listing operations in the sampled EAs. All households are interviewed in each EA in order to develop an updated list of agricultural households as sample frame of SSUs in the selected EA.

### 1.6.4 Sample size

The municipality is the sample domain of the census, therefore the sample size was determined ensuring reliable estimations of key variables of interest at municipality level. As recommended by FAO, agricultural area is a suitable variable that is considered in calculating the sample size.

For each municipality  $U_d$ :

- $M_d$  total number of agricultural households.
- $CV_{yd}$  the population coefficient of variation of the agricultural area calculated using the data of the National Population and Housing Census 2011 of Nepal.
- $CV_d^*$  maximum error accepted
- $\overline{def}$  estimates of the design effect.
- $g$  is the expected response rate.

The minimum sample size  $m_d$  for each municipality can be calculated using the following formula:

$$m_d = \frac{1}{g} \overline{def} \frac{cv_{yd}^2}{cv_d^{*2} + \frac{cv_{yd}^2}{M_d}}$$

The number of PSUs to be selected in the municipality  $d$  is given by

$$n_d = \left[ \frac{m_d}{m_0} \right] + 1$$

Where the brackets [ ] represent the integer part and  $m_0$  the number of agricultural households that will be selected in each PSU.

The target number of holdings sampled from each selected EA was set at 25. The actual number sampled varied between 20 and 30 and was determined in such a way to ensure equal probability of selection for all holdings in a municipality. Altogether, a sample of 330,112 holdings for the whole country (8% of all holdings) were selected from 13,576 EAs in the NSCA 2022.

### 1.6.5 Sample selection

The sample of PSUs was selected with a systematic probability proportional to size method considering the number of agricultural households as measure of size.

Selection of SSUs (agricultural households) were carried out in the field. The selection was done by using usual equal probability linear systematic sampling. However, before selection, an implicit stratification for Tarai and Hill/Mountain was used by making four implicit strata as follows:

- Less than 1 Bigha (0.68Ha)/10 Ropani (0.51Ha)
- 1 to 3 Bigha (0.68 to 2.03 Ha)/10 to 20 Ropani (0.51 to 1.01 Ha)
- More than 3 Bigha (2.03 Ha)/ 20 Ropani (1.01 Ha)
- Only having livestock

### 1.7 Data collection method and questionnaires

A direct face-to-face interview method of data collection with a paper questionnaire and a system of Computer-Assisted Personal Interview (CAPI) method using tablet were used in the census. The CAPI system was used only in three districts – Kathmandu, Lalitpur, and Bhaktapur of Kathmandu valley. The paper questionnaire method was used for data collection in the remaining 74 districts.

The questionnaires implemented in the census to collect data are as follows:

### **1.7.1 Holding listing form (Form 1)**

Form 1 is a holding listing form that has been used to list all the agriculture holdings (within the cut-off threshold) in the selected enumeration area. It has been used as a frame to select the holdings (SSUs).

### **1.7.2 Selected holding listing form (Form 1A)**

The Form 1A is used to prepare a list of selected holdings that is used to fill out the main questionnaire (Form 2).

### **1.7.3 Agriculture holding questionnaire (Form 2)**

Form 2 is the main questionnaire implemented in the census to collect the agricultural data in detail from the selected holdings.

### **1.7.4 Community questionnaire (Form 3)**

Form 3 is used to collect community-level data from the ward office of the municipality.

## **1.8 Field work**

The seventh census of agriculture was conducted in a single phase across the entire country. The main fieldwork - data collection for the census took place for 45 days between April 19 and June 2, 2022. Along with the supervision of the data collection the enumeration supervisors visited the wards where the selected enumeration areas were located. The supervisors gathered community-level data, including information on community infrastructure and facilities, by using a community questionnaire from the ward offices.

The filled-in forms collected from the fieldwork were checked and verified for completeness at the district census offices. Once verified, they were sent to the central storage for further processing.

## **1.9 Supervision**

Officials at the central level, along with district census officers, assistant officers, and supervisors, were assigned to oversee and manage the fieldwork. Monitoring and supervision forms were utilized for this purpose. The progress of the fieldwork was regularly reported to both the district census office and the NSO.

## **1.10 Data processing**

The completed questionnaires collected from the various census offices were safely stored in the central storage building. Data processing for the census was done within the NSO premises. The data processing center of the NSO was equipped with basic facilities and functionalities like laptops, a local server, a local area network (LAN), security cameras, furniture, and air conditioners.

The coding and editing of the questionnaires were accomplished by the temporarily recruited 50 coders and editors from November, 2022 to January, 2023. Likewise, the data entry was completed by 100 data entry operators from December, 2022 to February, 2023.

The data entry application was developed in CSPro which includes a comprehensive built-in system that has range and consistency checks programs. For data management, both SPSS and STATA packages were utilized. This involved editing, cleaning, and tabulation of data from the census. In situations where there was dubious information found during the data cleaning process, the agriculture holdings were contacted directly through phone calls or field visits for data verification. After ensuring the quality of the data, the statistical software package SPSS was predominantly used for data tabulation, analysis, and summarization of results.

## **1.11 Quality control**

The NSO was highly focused on ensuring the accuracy of census data by implementing various measures to minimize non-sampling errors. To reduce sampling errors, an appropriate sampling design was prepared modifying the designs used in previous agriculture sample censuses. Quality control mechanisms for the data included training, supervision, completeness checks, verification of data entry, and consistency checks.

## **1.12 Interpretation of data**

Census estimates given in the tables are subject to sampling errors, because the data are based on a sample of holdings rather than the entire population of holdings. The size of the sampling errors are estimated for major outputs. It will be presented separately in a technical report. The technical report will provide more detailed information about how the sampling errors are calculated.

Estimates are shown in the tables to the last digit. No statistical collection (sample survey or otherwise) can give fully accurate data to that level of precision. Therefore, in interpreting the tables, the figures should be suitably rounded off.

### **1.13 Publication and dissemination of census data**

The NSO used both traditional and modern methods to publish and disseminate the results of the 2021/22 Agriculture Census. The census results are published in both paper and digital formats, and in various levels for easy access to users.

The 18 statistical reports that will be published for different administrative levels are as follows:

1. National Report – 1 report
2. Sar-Sanchhep (a brief census report in Nepali) – 1 report
3. Province Report - 7 reports
4. Municipality Report (for each seven provinces) – 7 reports
5. District Summary Report (including key outputs of all 77 districts) – 1 report
6. Leaflet (in Nepali) – 1 leaflet

In addition to statistical reports in national, province and local levels, the NSO will also make the census data available on request. Both aggregate and microdata of the census will be provided to users as per the NSO dissemination policies. The NSO will also issue a technical report on the census. This report will provide a detailed description of the methodology used to conduct the census, including the sampling methods, data collection procedures, and data processing methods. The report will also present the sampling errors and an assessment of the data quality.

### **1.14 Limitations**

- The results are derived from the agricultural activities of the holdings that are within the cut-off threshold. The agriculture activities below the cut-off threshold are not included in the census.
- The results do not include agricultural activities operated by non-household holdings (institutions, cooperatives, big commercial farms). They are compiled separately and the outputs will be published in a different report.
- The census has produced precise estimates for major characteristics. However, for minor or location-specific characteristics, the estimates may be less accurate due to the inherent properties of the sampling.

### **1.15 Organization of the report**

This National Report of agriculture census is composed of four parts. The Part I, is the introductory section of the census report. It presents the background, objectives, scope and coverage of the census, statistical unit, reference period, sampling design, data collection tools and instruments, field work, supervision, data processing, publications and dissemination and limitations of the census.

Part II, describes the major findings of the census. Some key outputs of the census are compared with the results of past censuses. In this section the description is provided along with figures and charts for some key outputs of the census.

Part III, provides the statistical tables of all important variables of the census according to various sections of the questionnaire. The statistics provided through various tables presents detailed information of the census results.

Part IV, presents the definitions of various technical terms used in the census.

## Part II

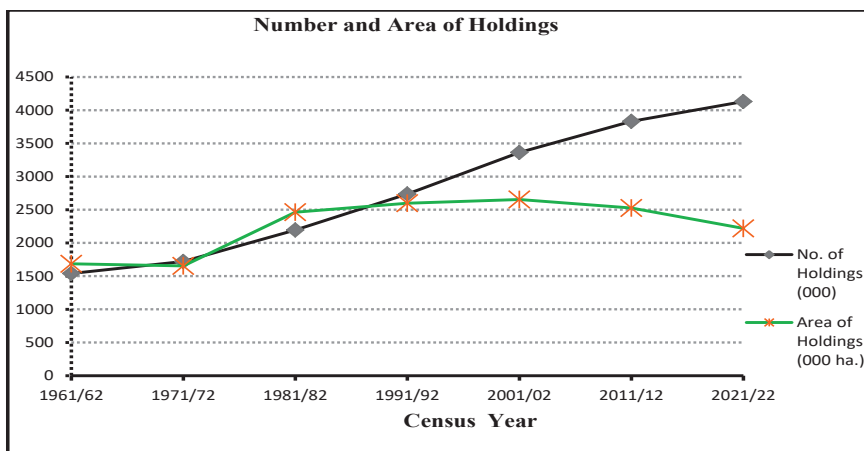

# Major Findings

### 2.1 Number and area of holdings

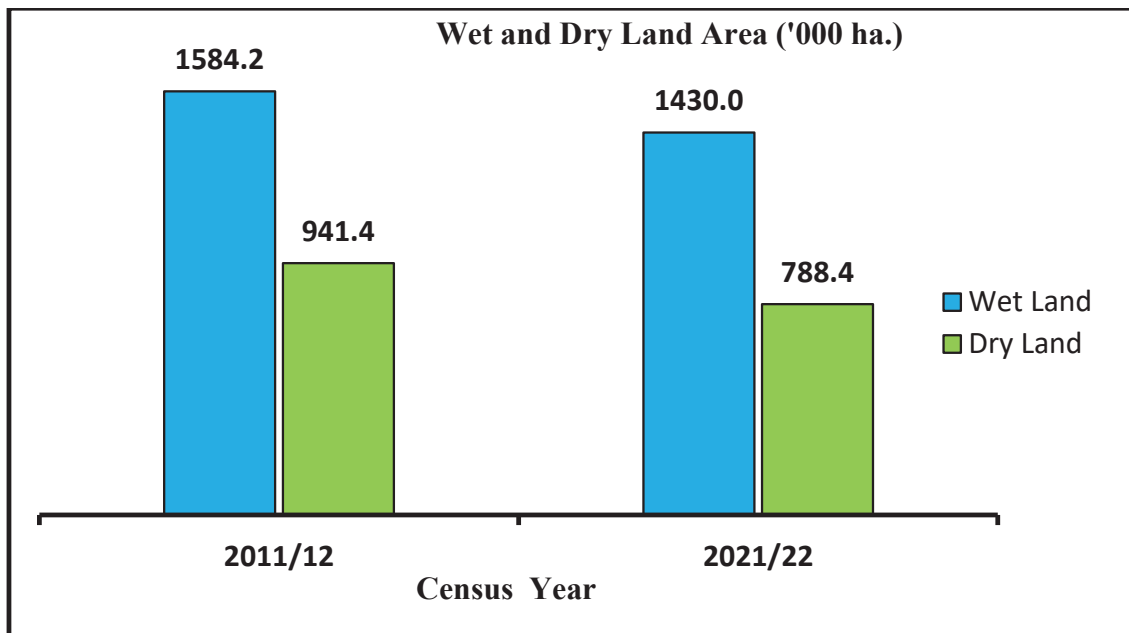

The NSCA 2021/22 agricultural census covered both types of agriculture holdings - those with land and those without land. Holdings with land refer to holdings cultivating at least 0.01 hectares of land, while holdings without land include those holdings that have at least one large animal (such as cattle or buffalo) or 5 small animals (such as goats or sheep) or 20 poultry (chicken or duck), and cultivate less than 0.01 hectares of land. According to the census report, there are a total of 4,130,789 farm holdings in Nepal, with 3,999,285 of them having land and 131,504 without land.

Over the period of 60 years from 1961/62 to 2021/22, there has been a steady increase in the number of holdings. In the first agriculture census of 2061/62, there were 1.54 million holdings in the country. This number has since grown to 3.36 million by 2001/02 and then further to 4.13 million by 2021/22.

Over the course of censuses, the area under holding has undergone a changing trend. In Nepal, the total area of holdings has increased from 1.68 million hectares in 1961/62 to 2.65 million hectares in 2001/02, but it has since decreased to 2.52 million ha. in 2011/12 and further down to 2.22 million hectares in 2021/22. In the sixty years of taking censuses, the number of holdings has increased by 168 percent, while the area under holding has only increased by 32 percent. Despite an increase in the number of holdings by 7.8 percent, there has been a 12.2 percent decrease in the total area of holdings between the last two censuses (2011/12-2021/22).

According to the 2021/22 agriculture census, out of a total of 2,218,410 hectares, 1,429,981 hectares are classified as wet land, while 788,429 hectares are classified as dry land. Over the last 10 years, there has been a decrease in the total land area, resulting in a corresponding 9.7% decrease in wet land and a 16.3% decrease in dry land.

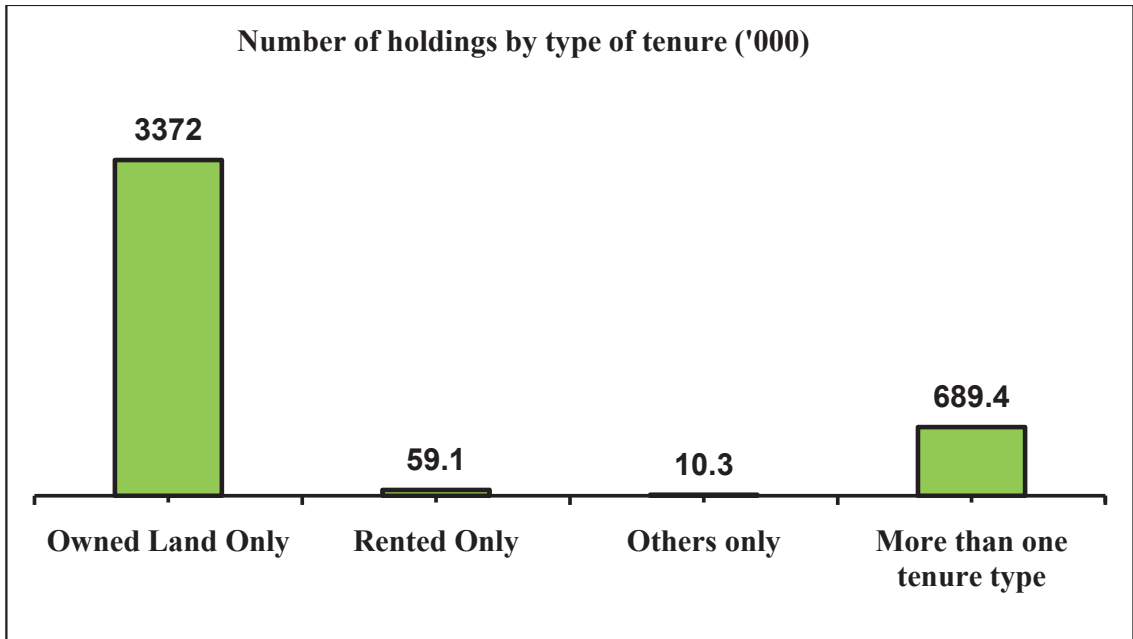

## 2.2 Land fragmentation

The land has become more fragmented over the years. The number of parcels does not show a particular trend, it has fluctuated between censuses. From 1981/82 to 2011/12, the total number of parcels increased from 9516.4 thousand to 12096.4 thousand, while the average number of parcels per holding decreased from 4.4 to 3.2. However, during the past decade, both the total number of parcels and average number of parcels per holding have decreased. In 2021/22, the total number of parcels is 11,583.9 thousand and the average number of parcels per holding is 2.8. Likewise, the Census report shows that the average parcel size has decreased from 0.21 hectares in 2011/12 to 0.19 hectares in 2021/22.

## 2.3 Land tenure

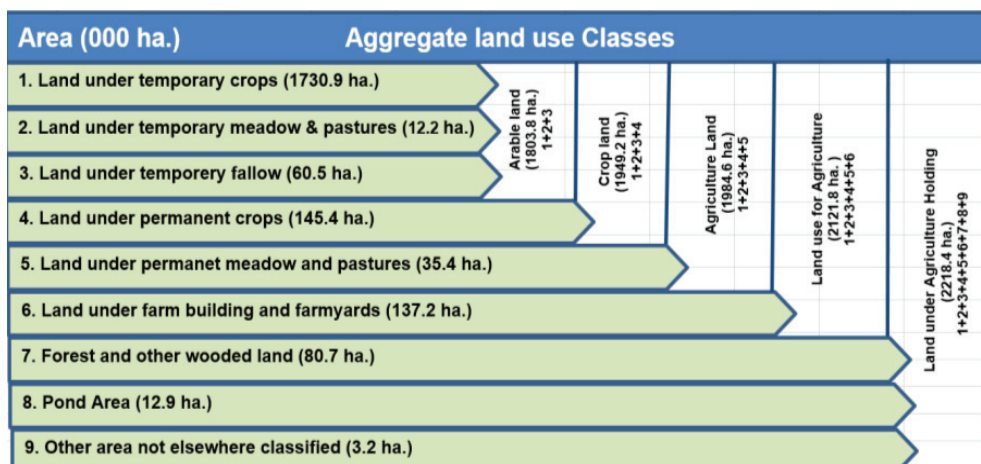

Most of the agriculture holdings in Nepal are owned and operated by the owners themselves. In 2021/22, about 81.6 percent of land holdings are fully owned, one percent (59,091 holdings) are fully rented, 0.2 percent (10,281 holdings) are other type of tenure with unidentified ownership, while 16.8 percent (689,391 holdings) are either partly owned, or rented, or under other arrangements.

## 2.4 Land use

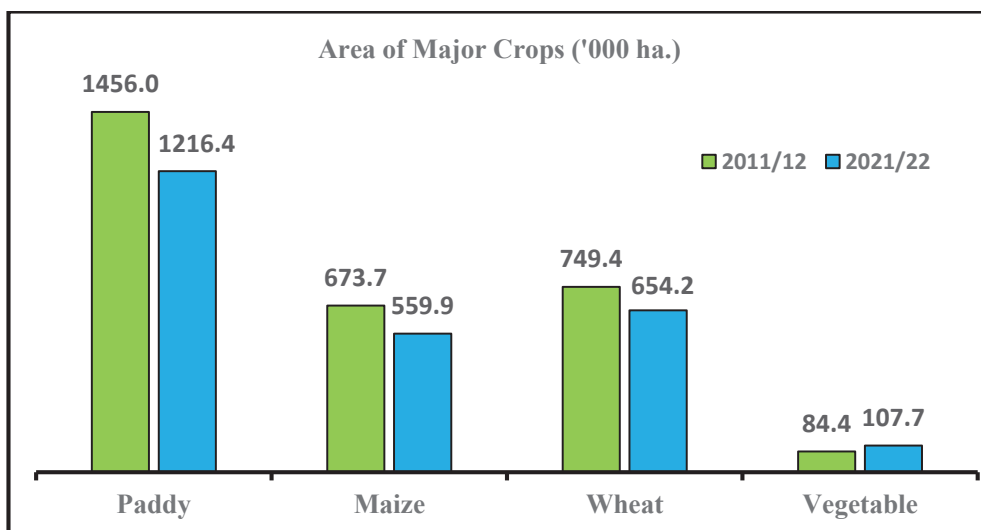

Out of 2,218,409.9 ha. of land operated by agriculture holdings in 2021/22, 2.12 million hectares (95.6%) are used for agriculture, 80.7 thousand hectares are covered by forests and other wooded land, 12.9 thousand hectares are used for ponds, and the remaining 3.2 thousand hectares are other land not elsewhere classified. In 2021/22 the area of forests and other wooded land is increased by 46.9%, and the area of ponds is increased by more than three times compared to the last Agriculture Census 2011/12.

In 2021/22, the majority of agricultural land, which amounts to 1730.9 thousand hectares, is used for temporary crops. On the other hand, the land used for permanent crops is only 145.4 thousand hectares. The total area of holdings has decreased by around three hundred thousand hectares, resulting in a decline in both temporary and permanent crops. Over the past ten years, the land used for temporary crops has decreased by 392,316 hectares (18.5%), while permanent crops have decreased by 23,093 hectares (13.7%). The area of temporarily fallow land has almost doubled, reaching over sixty thousand hectares in the 2021/22 census. A detailed distribution of land use is given below.

## 2.5 Temporary crops

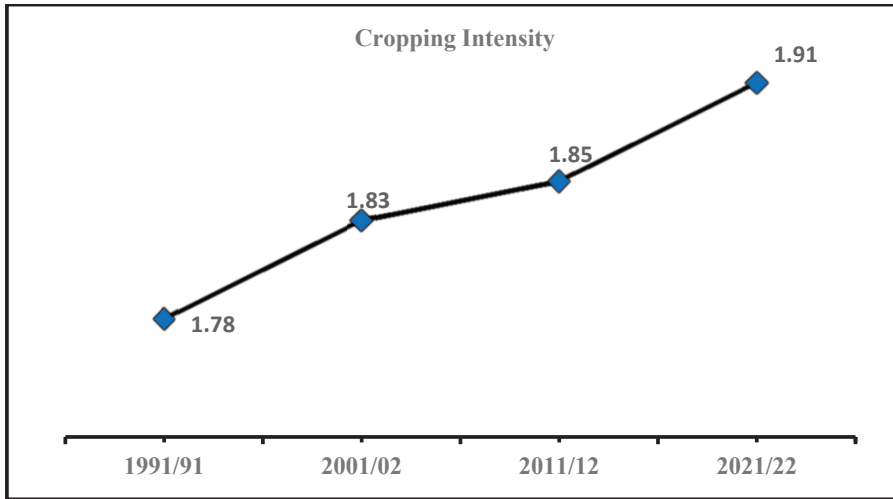

Among the total area of holdings, the temporary crops make up a significant portion of land (78%). Of this, 1,216,388 hectares are used for paddy. However, there has been a 16% decrease in the area used for paddy compared to the previous census. The same trend is observed for maize and wheat. On the other hand, the census has shown a significant increase in the area used for vegetables, as shown in the figure below.

## 2.6 Cropping intensity

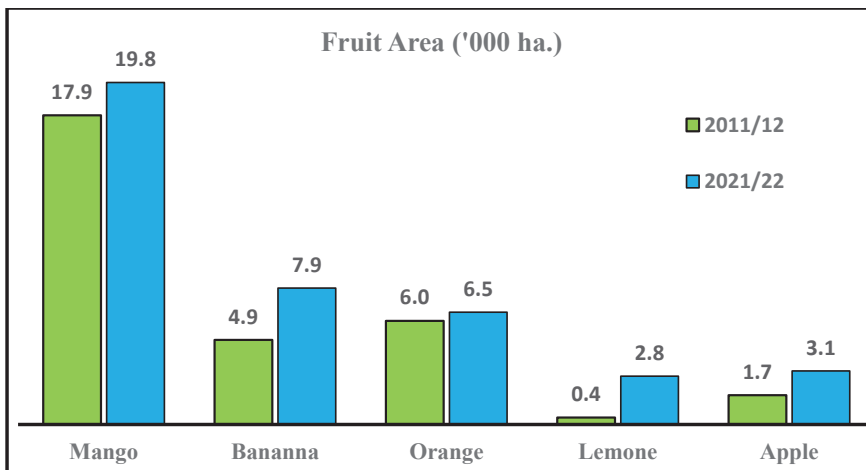

Cropping intensity refers to the frequency of production that can be obtained from a single plot of land in a given agricultural year. The cropping intensity increases when multiple crops are harvested consecutively from the same parcel of land. Although

the area dedicated to temporary crops has decreased, the land has been utilized more intensively for farming. Over censuses, the cropping intensity rate has steadily increased and reached 1.91 in the 2021/22 census. The following graph illustrates this trend.

## 2.7 Permanent crops

In 2021/22, only 145,363 hectares of land is under permanent crops. A total of 2,500,458 holdings (60.5%) reported having a permanent crop plantation, which is similar to the 2,316,210 holdings (60.4%) reported in 2011/12. There has been a decrease in the overall area of compact plantations in recent years. However, the areas under major fruits such as orange, mango, banana, apple and lemon have increased over the same period of time. Of the 145,363 hectares of permanent crop area, 69,018 hectares are under productive trees, while the remaining 76,345 hectares are under non-productive trees, according to the 2021/22 agriculture census.

## 2.8 Irrigation

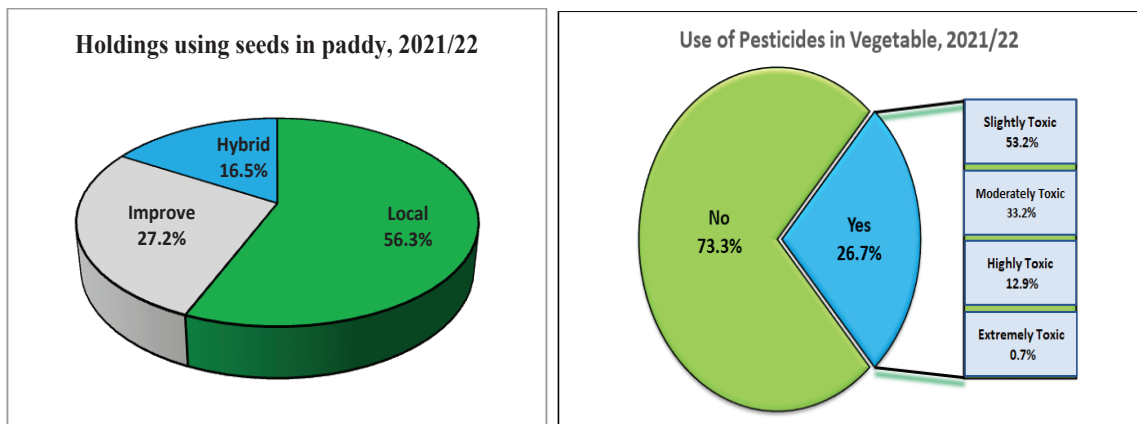

According to the 2021/22 agriculture census, the total area of irrigated land was 1,209,265.5 hectares, with 72.7 percent of this irrigated land being irrigable throughout the year. The latest census also revealed that the percentage of irrigated land has increased, with 54.5 percent of land being irrigated in 2021/22 compared to 52 percent in 2011/12.

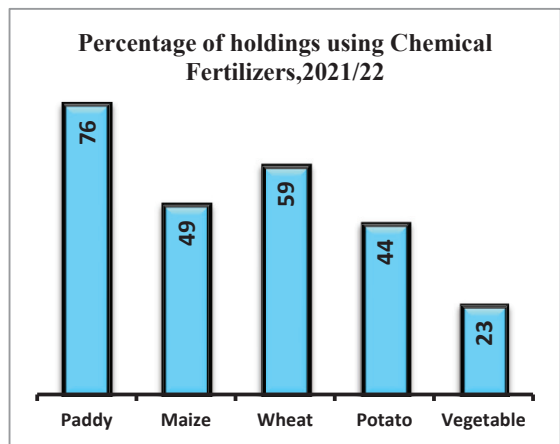

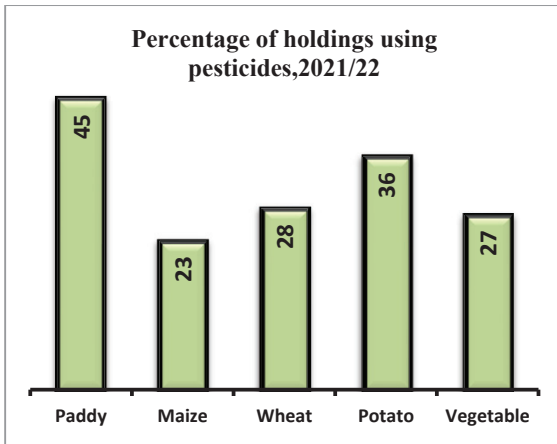

Over the last decade, there has been an increase in the number of holdings utilizing irrigation facilities from 2,472,296 to 2,889,106 holdings. According to the 2021/22 census of agriculture, 70 percent of all holdings use irrigation facilities.

## 2.9 Agriculture inputs

In Nepal, there has been a rise in the use of modern farming techniques such as improved and hybrid seeds, chemical fertilizers and pesticides. However, the most recent census conducted in 2021/22 shows that more than half (56.3%) of paddy farmers still use local seeds, with only 27.2% using improved seeds and 16.5% using hybrid seeds. It is worth noting that the use of hybrid seeds has increased from 5.4% in the previous census to 16.5% in the 2021/22 census. The agriculture census also reports that almost half (47.9%) of farmers in Nepal grow vegetables. Out of these vegetable farmers, 26.7% use pesticides, with 53.2% opting for slightly toxic (green) pesticides, 33.2% using moderately toxic (blue) ones, 12.9% using highly toxic pesticides, and only 0.7% using extremely toxic pesticides.

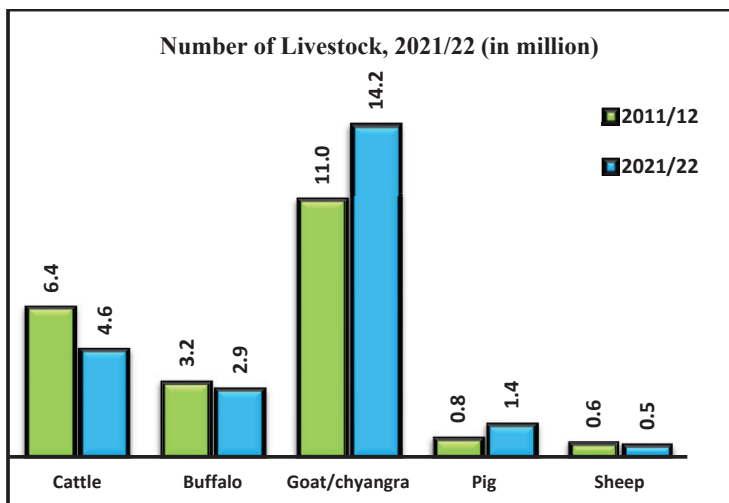

According to the 2021/22 census, approximately 45% of holdings utilized pesticides for their paddy crops, followed by potato at 36%, vegetables at 27%, wheat at 28%, and maize at 23%. Likewise, the use of chemical fertilizers was most prevalent in paddy crops at 76%, followed by wheat at 59%, maize at 49%, potato at 44%, and vegetables at 23%. These findings are illustrated in the figure below.

## 2.10 Livestock and poultry

The number of livestock and poultry in the country has been on the rise, except for cattle, buffalo, and sheep. Between 2011/12 and 2021/22, the number of holdings that rear livestock increased from 3,353.8 thousand to 3,405 thousand. However, the number of cattle on agriculture holdings decreased from 6,430 thousand to 4,559 thousand, which is a decrease of 29%. The number of male cattle decreased significantly by almost 1,338 thousand. On average, holdings with cattle had 2.7 cattle in 2021/22, down from 2.8 ten years earlier. Over the past decade, buffalo numbers decreased from 3,174 thousand to 2,923 thousand, while goat and chyangra numbers increased from 10,990 thousand to 14,242 thousand. Pig numbers increased from 818 thousand to 1,358 thousand, sheep numbers decreased from 608 thousand to 478 thousand, chicken numbers increased from 26,268 thousand to 45,118 thousand, and duck numbers increased from 430 thousand to 1,326 thousand.

## **2.11 Farm labor**

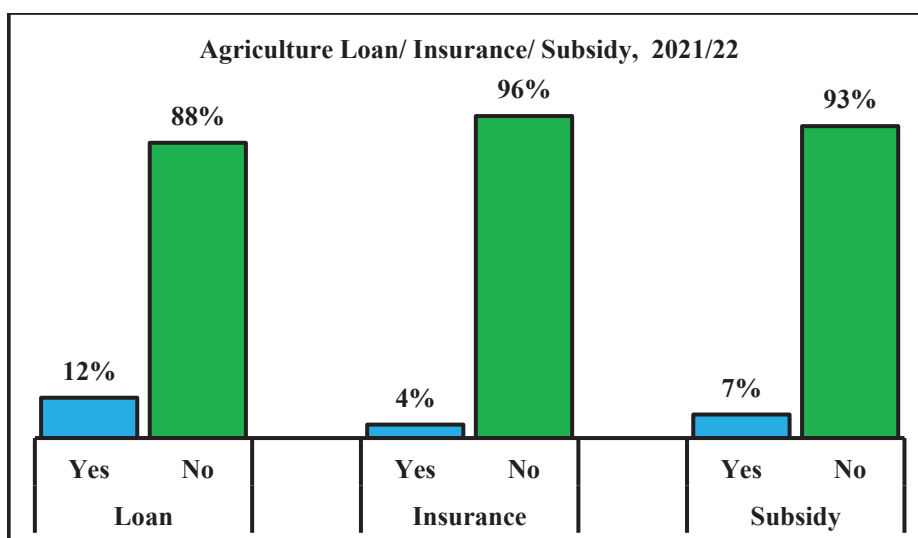

The census report of 2021/22 shows that there are a total of 74,591 permanent workers employed in 39,190 agriculture holdings. This is a slight decrease of 3.1 percent compared to 2011/12, where there were 72,333 workers employed in 38,523 agriculture holdings. The majority of workers are male, with only 41 percent of female workers. In terms of occasional basis work, around 67.8 million man-days are used by 1.8 million holdings in 2021/22, which is a decrease of 5 percent from 71.3 million man-days used by 1.5 million holdings in 2011/12. Similarly, around 37.3 million man-days are used as an exchange basis by 1.8 million holdings in 2021/22, which is a decrease of 24 percent from 49.1 million man-days used by 1.5 million holdings in 2011/12. Female workers had a higher participation rate in occasional and exchange based work. In addition, 2.5 million man-days are used as a contract basis by 0.1 million agriculture holdings in 2021/22 as introduced for the first time in the census 2021/22.

## **2.12 Agriculture loan, insurance and subsidy**

According to the agriculture census 2021/22, there are currently 483,208 holdings with existing agriculture loans, which makes up 12% of all holdings. This is a decrease from the previous census in 2011/12, where it was reported at 22%. Out of all the sources of loans, the highest percentage (39%) of holdings with agriculture loans have received them from cooperatives. This is followed by relatives (14%), women's groups (14%), and others. Additionally, there are 1,414,997 holdings (34%) seeking more loans or additional loans. Of those seeking loans, 37% are doing so for the purpose of livestock/poultry farming, followed by agriculture inputs (32%), irrigation (13%), and so on.

Out of the total number of holdings, only 4% (182,441) holdings are reporting insurance coverage for agricultural activities. Among those who have reported, the majority of holdings (84%) have taken insurance for livestock farming, followed by cereal crop (8%), poultry farming (5%), and others.

Likewise, out of the total number of holdings, only 308,512 (7%) have received government subsidies for agricultural activities. Among those, the highest percentage received subsidies for chemical fertilizers (46%). Following that, 35% received subsidies for seed/seedlings/grass, 15% for agricultural equipment, and 8% for agricultural infrastructure, among others.

### 2.13 Farm population

In the agriculture census of 2021/22, the agriculture household accounts to 62 percent of total households of the country. It was 71 percent in the last census 2011/12. The 2021/22 census reports the total number of farm population is 19,447,955. Out of this population, 9,543,825 (49.1%) are male and 9,904,130 (50.9%) are female. The farm population accounts to 66.7% of the total population of the country in 2021. Compared to 2011/12, the farm population has decreased by 5%. The male-to-female sex ratio is 96:100 in 2021/22, while it was almost 100:100 in 2011/12. The census report shows that male-headed holdings are 2,792,505 (67.6%) and female-headed holdings are 1,338,284 (32.4%), whereas in 2011/12, it was male 3,104,338 (81%) and female 726,755 (19%). Over the past decade, the percentage of female-headed households has significantly increased. The average size of a farm household was 5.4 persons in 2011/12, and it has slightly decreased to 4.7 persons in 2021/22.

Out of the 4,130,789 agricultural holders, 25.7% belong to the age group of 35-44 in 2021/22, which is slightly lower than the 26.7% in the same group in 2011/12. Similarly, the percentage of holders from the age group of 45-54 has decreased from 25% in 2011/12 to 24.8% in 2021/22. However, the percentage of holders from the age group of 55-64 has increased from 17.6% in 2011/12 to 18.3% in 2021/22, and the percentage of holders from the age group of 60+ has also increased from 11.4% in 2011/12 to 13.7% in 2021/22.

## **PART IV**

### **DEFINITIONS OF TERMS USED**

**Agriculture Holding** is an economic unit of agricultural production under single management comprising all livestock and poultry kept, and all land used wholly or partly for agricultural production purposes.

Small agricultural operations were excluded from the census. A holding was considered to be an agricultural unit satisfying any one of the following conditions:

- having area under crops greater than or equal to a quarter of a ropani (or four anna) in the hill or mountain district (0.01272 hectares), or greater than or equal to eight dhur (0.01355 hectares) in the Terai; or
- keeping one or more head of cattle or buffaloes; or
- keeping five or more head of sheep or goats; or
- keeping 20 or more poultry.

A household with livestock but no land was not considered a holding if the household did not use the livestock for agricultural purposes (e.g. a livestock trader).

The holding includes all land operated, whether or not it is owned by the holding. The holding's land may consist of one or more parcels located in one or more separate areas within a district. The holding is generally the same as a household (see definition of household).

Public grazing land is excluded. Land owned jointly by more than one person for grazing or for other purposes is included.

Holdings are defined in terms of their land and livestock holdings on the day of the census enumeration.

The Nepali word for the term holding used in the census was "**chalan (which means being used)**" or "**chalan gareko jagga**".

**Holdings without land** are holdings keeping livestock but having an area under crops of less than 0.01272 hectares in the hill or mountain districts, or 0.01355 hectares in the Terai (see definition of holding). Holdings without land are shown in the tables as having a small area of land.

**Holder** is the person in the holding who exercises the management control over the operations of the holding. There is only one holder in each holding. The holder may or may not be the same person as the household head.

**Household** is a group of persons who live in the same dwelling and make common arrangements for the provision of food and other essentials of daily living. A household may comprise one or more persons and may include unrelated persons. More than one household may live in a single house.

**Head of the household** is the person in the household acknowledged as head by the other members. The head has primary authority and responsibility for household affairs. The head of the household may or may not be the same person as the holder.

**Parcel** Land operated by a holding consists of one or more parcels. A parcel is a piece of land entirely surrounded by land operated by someone else or not operated at all. A parcel may consist of one or more adjacent fields. The Agricultural Census parcel may be different from the parcel used in cadastral work.

**Wet land** refers to low land where water remains on the surface or on the upper soil layer, making the land suitable for main paddy cultivation.

**Dry land** refers to any land other than the wet land, i.e., land which is not suitable for main paddy.

**Land tenure** refers to arrangements or rights under which the holder operates the land of a holding. A holding may be operated under one or more tenure forms. For the purposes of the Agricultural Census, there are three forms of land tenure – land owned by the holding, land rented from others and other tenure forms.

**Land owned** is the land area operated by the holding for which the holder possesses title of ownership. Land owned also includes land which the holder can reasonably expect to eventually possess title of ownership (e.g. inherited land) and land which has been operated for many years by the same holder without any other claims being made on the land.

For the purposes of measuring land operated by holdings, land owned does not include land owned but rented to others.

**Land rented from others** is the land rented or leased by the holder from other persons. Land rented is divided into a number of categories according to the basis on which the land was rented:

- rented for a fixed amount of money;
- rented for a fixed quantity of the produce;
- rented for a fixed share of the produce;
- rented in exchange for services provided (e.g. labor);
- rented as part of a mortgage arrangement; and
- other rental arrangements (e.g. rented for no payment).

**Other tenure forms** refer to land operated under tenure conditions other than ownership or renting from others. This includes squatter land and land under dispute.

**Land rented out** refers to land owned by the holder but rented to other persons, usually for a limited time period.

**Land use refers** to the major classes of land use on the holding. For the purposes of the Agricultural Census, land operated by the holding is classified according to the land use categories given below:

- A. Land used for agriculture
  - a. Agriculture land
    - I. Crop land
      - i. Arable land
        - Land under temporary crops
        - Land under temporary meadows and pastures
        - Land under temporary fallow
      - ii. Land under permanent crops
    - II. Land under permanent meadows and pastures
  - b. Land under farm buildings and farmyards
- B. Forest and other wooded land
- C. Pond
- D. Other land not elsewhere classified

Arable land is further subdivided into land under temporary crops, land under temporary meadows and land under temporary fallow. Detailed descriptions of the various land use categories are given below.

**Arable land** refers to all land generally under cultivation and is divided into four categories:

- land under temporary crops,
- land under temporary meadows, and
- land left temporarily fallow.

A description of each of these categories is given below. Arable land excludes land under permanent crops.

**Land under temporary crops** refers to land used during the reference year for crops with an under-one-year growing cycle; i.e., crops, which must be newly sown or planted for further production after the harvest. Land under temporary crops

shown in Table 3 refers to the use of the land, not to the area of temporary crops shown; land used for double cropping will be counted only once. By contrast, Tables 5 and 6 show the area of all crops sown – a double-cropped piece of land will be counted twice in these tables.

**Land under temporary meadows** refers to land, which has been cultivated with forage crops for mowing or pasture for less than five years.

**Land under temporary fallow** refers to land which the holder chose not to cultivate during the reference year, with the intention of cultivating it at a later date. Land which had been left idle for five years or more was included under another land use category (such as permanent meadows and pastures).

**Land under permanent crops** refers to land cultivated with long-term crops which do not have to be replanted for several years after each harvest.

**Permanent meadows and pastures** refer to land which have been used for five years or more for growing forage crops.

**Forest and other wooded land** refers to wood lots or timber tracts, natural or planted, constituting part of the holding which have or will have value as wood, timber, other forest products or for protection.

**Ponds** refer to land under permanent standing water. The ponds may be natural or man-made and may be used for fishing, watering livestock, irrigation or any other purpose.

**Land under farm buildings and farmyards** refers to surfaces occupied by operating farm buildings (hangars, barns, cellars, silos), buildings for animal production (stables, cow sheds, sheep pens, poultry yards) and farmyards. The area under the holder's house (including the yard around it) is also classified here if it makes up part of the agricultural holding.

**Other land not elsewhere classified** refers to land which is not being cultivated and which would require some development before it could be brought into crop production and land occupied by non-farm buildings, roads, ornamental gardens and other open spaces on the holding.

**Irrigation** refers to purposively providing land with water, other than rain, for improving pastures or crop production. Natural flooding of land by rainfall or overflow of rivers is not considered as irrigation. Rainwater or uncontrolled flooding, which is collected and later used on the holding, is considered irrigation.

Land under irrigation is shown in the tables according to the source of irrigation water. The sources given are river/lake/pond (by gravity), river/lake/pond (by

pumping), dam/reservoir, tube well/boring, other and mixed. "Others" includes taking the irrigation water from wells and springs. Mixed sources refer to a combination of the above sources (combination of two or more source).

**Area under temporary crops** refers to the area of temporary crops sown for harvest during the reference year 2021 (see under "Land under temporary crops" for definition of a temporary crop). Crops sown in 2020 for harvest during 2021 are included. Crops sown in 2021 for harvest in 2022 are excluded. Crops sown but not harvested (e.g. because of damage or weather conditions) are included.

The crop area data shown in Tables 5 and 6 refer to the area of all crops sown. This is greater than the land under temporary crops (as shown under land use in Table 3), because land may be used for cultivating crops in more than one season (double cropping).

**Crops under pure stand** refers to a single crop cultivated alone in a field (as opposed to a "mixed crop"). A pure stand crop may be either temporary or permanent. Crops cultivated on the same piece of land in two seasons (double cropping) are pure stand crops.

**Mixed crops** are two or more different temporary or permanent crops grown simultaneously in the same field or plot (as opposed to "pure stand" crops). Temporary and permanent crops cultivated together are called "associated crops".

Mixed crops include inter-planted crops and crops planted unsystematically as a mixture in a field. The area of mixed crops was estimated using whatever convenient method was appropriate. In some cases, the mixed cropland was divided according to estimates of the area under each crop. In other cases, this was not possible and an estimate based on seeding rates was made. In all cases, the total of the crop areas for the mixed cropland was the same as the area of the land itself.

**Associated crops** are temporary and permanent crops cultivated simultaneously in the same field. The area of each individual crop in associated crop land was determined using similar methods to that for mixed crops, and was done in such a way that the total of the individual associated crop areas was equal to the area of the associated crop land itself.

**Compact plantation** of permanent crops refers to plants, trees and shrubs planted in a regular and systematic manner. Plants, trees or shrubs planted in sufficient density to permit measurement of the area planted, are also considered compact plantations. Permanent crops not forming a compact plantation are considered "scattered trees".

**Permanent crops of non-productive age** are permanent crops which are not bearing fruit or which are below the fruit bearing age.

**Permanent crops of productive age** are permanent crops which are already bearing fruit or are otherwise productive.

**Scattered trees** refer to plants or trees planted in a scattered or isolated manner throughout the holding. For scattered trees, it was only possible to collect data on the number of trees (not area of trees as for compact plantations).

**Fertilizers** refer to anything added to the soil to increase the amount of plant nutrients to promote crop growth. For census purposes, there are two types of fertilizers – local/organic and minerals/chemical.

**Local/organic fertilizers** are organic substances such as farmyard manures, compost, etc.

**Minerals/chemical fertilizers** are those fertilizers that are manufactured usually through an industrial process.

**Pesticides/insecticides** refer mainly to insecticides but also include fungicides, fumigants, herbicides, rodenticides and other materials.

**Local/improved/hybrid seeds** refers to whether or not the holding used high yield variety seeds on the holding during the reference year.

**Livestock** data refer to numbers of animals kept by the holding on the day of enumeration. This includes livestock owned by the holding and livestock being leased in by the holding. The livestock counts include livestock present on the holding on the day of enumeration as well as livestock which are temporarily absent from the holding (e.g. being grazed off the holding). Livestock includes poultry.

Livestock data are shown in the tables for cattle, chaunri (including yaks), buffaloes, goats, sheep, pigs, horses, mules/asses, other animals, chickens, ducks, pigeons, and other poultry.

**Agricultural implements** refers to the use of the equipment for agricultural purpose on the holding during the reference year, regardless of whether the equipment was owned by the holding. Equipment not used for agricultural purposes is excluded. The number of items of the equipment used, as given in Table 12 and 13, refers to the number on the holding on the day of enumeration. Items used are shown according to ownership – either owned solely by the holding or owned by the landowner. The latter category includes any equipment not owned by the holding.

**Non-residential buildings** refers to the use of non-residential buildings on the holding for agricultural purposes during the reference year. Buildings are shown by different tenure and use. A building used for both residential and non-residential purposes is considered residential and therefore excluded.

**Forest trees on holding** refer to any trees present on the holding on the day of enumeration apart from fruit trees and any other trees categorized as permanent crops.

**Agricultural credit/loan** refers to whether, on the day of enumeration, the holding owed money on any loan which had been received for agricultural purposes, regardless of when the loan had been taken out.

**Permanent agricultural workers** are workers employed permanently by the holding during the reference year. By permanent is meant that the person worked on the holding for six months or more during the reference year. In mountain areas, a permanent worker was anyone considered permanent by the holder. Permanent workers exclude any members of the holder's household (even if the person is unrelated and being paid for work on the holding). The number of permanent workers was counted on the day of enumeration.

**Occasional agricultural workers** are workers employed by the holding who are not considered to be permanent. Occasional workers include only those who work for payment in cash or in goods on a daily basis. Work done in exchange for labor is not included.

An occasional worker who works around 8 hours a day is considered to be a man-day. The number of man-days workers was counted during the reference period.

**Exchange of labour (Parma)** workers includes only those who work without taking any kind of payments (cash or goods). In addition, holders exchange their family member as an agriculture worker within their community.

**Contract labour** are workers employed by the contractor to whom a part of agriculture work is contracted out.

**Agroforestry** is a sustainable land management system in which forest species of trees and other wooded plants are purposely grown on the same land as agricultural crops or livestock, either concurrently or in rotation.

**Farm population** is the population of all individuals usually living in agricultural households.

**Greenhouse farming** refers to crop cultivation carried out under a controlled environment. It is a structure covered with a transparent material like polythene or polycarbonate plastic or fiberglass sheets for admitting natural light for plant growth. However, the common practice of vegetable farming in tunnels covered by plastic sheets is also included in this census.

**Nursery** is an enclosed place where flower or fruit or forest plants are propagated and grown to a desired size for the purpose of own plantation or to sell to others.
